

ATTACHMENT B

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

1. (Currently Amended) A computer system for storing and retrieving data, comprising:
an identifier including three or more variables for identifying each data stored in said computer system, wherein one of said at least three or more variables is a physical location variable relating to a physical location other than in a computer.
2. (Original) The system of claim 1, wherein one of said three or more variables is a device identification variable.
3. (Original) The system of claim 2, further includes a timestamp for prioritizing said data.
4. (Original) The system of claim 3, wherein one of said variables may be filled by a wildcard.
5. (Original) The system of claim 4, wherein said system includes a registry for storing said data.
6. (Original) The system of claim 5, wherein said registry is provided in a database structure.
7. (Original) The system of claim 1, wherein said three or more variables includes a device identification variable, an application identification variable and a user identification variable.

8. (Original) The system of claim 7, further including a timestamp for prioritizing data.
9. (Original) The system of claim 8, wherein one of said variables may be filled by a wildcard.
10. (Original) The system of claim 9, wherein said system includes a registry and said registry includes a database structure for storing said data.
11. (Currently Amended) A computer registry for storing and retrieving preference data, comprising:
 - an identifier including at least three variables for identifying a data stored in said computer registry, wherein one of said at least three or more variables is a physical location variable relating to a physical location other than in a computer.
12. (Original) The registry of claim 11, further comprising a means for providing a floating value to said at least three variables.
13. (Previously Presented) The registry of claim 12, further comprising a means for associating a time stamp to said data.
14. (Currently Amended) A method for storing and retrieving data in a computer system, comprising the steps of:
 - identifying each stored data in said computer system by an identifier including three or more variables, wherein one of said at least three or more variables is a physical location variable relating to a physical location other than in a computer.
15. (Original) A method according to claim 14, further comprising the step of storing data in a registry.

16. (Original) A method according to claim 15, wherein one of said three or more variables is a device identification variable.
17. (Original) A method according to claim 16, further including the step of time stamping said data for prioritizing said data.
18. (Original) A method according to claim 17, further including the step of filling one of said variables with a wildcard.
19. (Original) A method according to claim 18, further including the step of deleting one or more data items that has been superseded by a subsequent data having same identifier but a higher time stamp value.
20. (Original) A method according to claim 19, wherein said registry is provided in a database structure.
21. (Previously Presented) A system for storing and retrieving data as in claim 1 wherein said location comprised the locating a device.
22. (Previously Presented) A computer system as claimed in claim 1 wherein at least one of said stored data further includes preference data.
23. (Previously Presented) A computer registry as claimed in claim 11 wherein at least one of said data stored in said computer registry includes preference data.
24. (Previously Presented) A method according to claim 14 wherein at least one of said stored data includes preference data.
